

MPP-16/24-2

MODULAR PATCH PANEL

Raxxes™ patch panel frame complements our work area products and offer a feature-rich and flexible patching solution. Raxxes™ modular jacks are ordered separately and quickly snap into black patch panels. This modular capability allows custom configuration of panels to suit a variety of applications. Raxxes™ modular jacks can be easily removed and placed from the panel making moves, adds, and changes quick and easy. Cutouts allow terminated couplers to pass through panels from front to back or back to front. Black mild steel panels are powder painted can be mounted directly to an EIA standard 19 inch rack or cabinet. Each ports can easily be identified and additional port marking space is also available. Oversized patch panels are available for applications that require additional labeling space. They provide the same flexibility as our standard patch panels and feature a write-on designation surface above each coupler opening that may also be used as a space for adhering your own label. The Raxxes™ MPP series patch panels use the Raxxes™ MTKJ-v1 Cat 6 Tooless Modular jack or the Raxxes™ MKJ6-v3 modular jack (ordered separately). The modular jacks are available in 6 colors and help you color co-ordinate your network if required.
